

Case Study

Solomon
Temperature Controlled Vehicles

Nisa
making a difference locally

Solomon's have recently completed the build to supply DHL and Nisa with a fleet of 62 new 26T vehicles.

Featuring a host of revised design features and Solomon's new aerodynamic and cycle safe Side guard systems, the vehicles are some of the most bespoke vehicles Solomon Commercials Produce.

The Benefits

Having been the first customer to specify the now market leading Solomon Slipstream design for over cab refrigeration units, DHL and Nisa are used to leading the way.

With their new fleet of 26T rigid vehicles, they have again worked with Solomon to develop an incredibly efficient market leading vehicle design.

Internally, the vehicle features a multi temperature setup, allowing for frozen, chilled and ambient produce to be transported on the same delivery. This flexibility allows the vehicles to be used to their maximum, increasing efficiency. A bespoke designed 'slide to side' lane system takes this flexibility even further, allowing the whole vehicle to be opened up internally.

The exterior of the truck has real impact on the road. Featuring a Thermoking Undermount unit, DHL Nisa have taken full advantage of the opportunity for improved aerodynamics and specified the full Solomon slipstream aerodynamic design, with a full front curve to the roof and rear Kamm tail curve also. This body design is continued onto the DAF cab with a full Aerodyne cab aerodynamic kit.

The design also displays the newly designed Solomon full side skirt system. This system has been designed to improve aerodynamics and safety, improving airflow around the vehicle, and preventing pedestrians and cyclists from becoming trapped under the body. The innovative design is able to be fitted around a standard side guard system, a major benefit when compared to standard side skirt setups.

With the striking Nisa livery's applied, the vehicle really stands out on the road, displaying DHL and Nisa once again as forward thinking companies in transportation.
