

SALVO

Solomon supply three new vehicles to Salvo 1968

Salvo 1968, purveyors and importers of fine Italian produce, have recently taken delivery of three new 7.5t vehicles with the insulated bodies produced by Solomon Commercials.

The Benefits

Established in 1968 and now servicing the UK from their office in Hertfordshire, Salvo are renowned for the supply and distribution of the highest quality products sourced from around Europe and are continually raising standards, particularly online, where they were the first Italian wholesaler to launch an online shopping platform in 2013.

Solomon Commercials bodywork is built to an exacting standard, designed to withstand even the most rigorous delivery schedules. Sitting proudly on a striking Iveco Eurocargo ML75E chassis-cab, with eye-catching body wrap livery, the Solomon body, combined with a GAH XTF43T refrigeration unit, is designed to maintain controlled temperatures all-year round.

Looking to increase their existing payload and ease their operation, these vehicles were constructed with aluminium sub-frames to reduce their weight as well as including a pallet width side door to enable products to be delivered from the front and rear of the vehicle at the same time.

The interior kick strip has been doubled in height and secured to a full length internal structure to prevent bowing and ultimately irreversible damage.

'Having worked with Solomon for a number of years, building a good working relationship with their mobile engineers and experiencing, first hand, the quality of their workmanship, the decision was taken to offer them the opportunity to construct our new vehicles.

From previous experience, we were able to provide a base design but then through various consultations, design proposals and discussions we came up with the final spec which looks to be perfect for our current operation.

I have a great relationship with their people who are always happy to assist with our requirements' - **George Georgiou** (Transport and Logistics Manager)
